Tandem Skydive

What's it like?

Tandem skydiving is the EASIEST way to make that "First Jump". After a short training class, you will suit up and you and your instructor will climb to over 11,000 feet (yep, that's over 2 miles high!).

Wearing a harness connected directly to the Tandem parachute system, you and your Tandem Instructor will jump together and accelerate to 120 MPH, freefalling for about 45 seconds. At 5,500', the parachute is deployed by the instructor (or you!). During the 5 minute parachute ride back to earth, you will enjoy the beautiful Smoky Mountain view and, if you like, try your hand at piloting a modern square parachute.

Videographers are usually available to fly along and capture your freefall experience. Videos include the pre-flight training, scenes from the plane ride, complete freefall and landing, as well as the 'candid' interviews and other fun stuff! The 6-8 minute finished DVD Video, edited to music, could even be ready before you leave (if time permits)!
